

Setup the Disqus comment system in WordPress

Article Number: 1065 | Rating: Unrated | Last Updated: Mon, Nov 16, 2020 at 8:31 PM

Disqus is a comment management system to help you build your audience and manage comments on your website. There are two major steps: setup an account with Disqus and then add the plugin in WordPress. **To setup your account with Disqus:** Open your browser, and go to [Disqus.com](https://disqus.com). Either log into an existing account or sign up for a new account. Once logged in, [select how you plan to use the plugin](#). Choose **I want to install Disqus to my site**. Complete the registration form, and click **Create Site**. Choose **WordPress** as your platform. Return to your WordPress website. **To install the Disqus plugin:** Log in to WordPress. From the Plugins page, search for and install Disqus. Activate the plugin. Go to **Comments > Disqus**. Sign in with your Disqus account. Once you have logged in, select the site you registered with your Disqus account. Click **Next** to complete the set up. Go back to your account at Disqus.com. Complete the **Configure** process on the Disqus website.
