

Setup a comment blacklist in WordPress

Article Number: 1125 | Rating: Unrated | Last Updated: Mon, Nov 16, 2020 at 10:12 PM

You can setup a comment blacklist in WordPress, which will automatically delete any comments that contain keywords, names, URLs, email address or IP addresses that you specify. This is an effective way to help prevent comment spam. Log in to WordPress. Go to **Settings** > **Discussion**. Scroll down to the **Comment Blacklist** section. Enter any of the following into the box, one item per line:

Keywords or phrases Domains or URLs Names Email addresses IP addresses Scroll to the bottom of the page, and click **Save Changes**.
