

## Clear your cache

Article Number: 1172 | Rating: Unrated | Last Updated: Wed, Nov 18, 2020 at 9:34 PM

Your Managed WordPress account has caching features including the CDN cache, which can improve your load times. However, your cache might cause problems and need to be "flushed" (or cleared) if you: Made manual changes to your database or WordPress site files outside of the admin controls (e.g. via sFTP or through phpMyAdmin). Made changes to your site but you don't see those changes on the Internet. Manually migrated your site instead of using the built-in migration tool. **Steps** Log in to WordPress. At the top of the page, select **Managed WordPress** > **Flush Cache**. **More info** Find out more [about the CDN](#). If you don't see **Flush Cache**, you might have deleted the plugin it uses. Please [contact customer support](#).
