Change your PHP upload limit

To change the limitation, edit or add the following values in your PHP initialization file.

```
file_uploads = On  
post_max_size = 50M  
upload_max_filesize = 50M
```

The above settings change your PHP upload limit, allowing you to upload files up to 50MB in size.

Maximum upload limits

The upload limit does not guarantee an upload will complete — only that it isn't rejected by the server.

Uploads beneath the limit can still fail because of:

- Upload speed, which can cause timeouts from your PHP script or your browser
- Your account's resource availability, which can cause large files to fail
