

Open phpMyAdmin

Article Number: 1185 | Rating: Unrated | Last Updated: Mon, Nov 22, 2021 at 2:19 PM

You can open phpMyAdmin to directly edit the database for any Managed WordPress site. This is useful if you want to do a manual import/export of a database, or change individual database values. 1. Go to your Heart Internet [control panel](#) and open the Managed WordPress product page. 2. On your **My Products** page, next to **Managed WordPress**, click **Manage All**. 3. For the website whose database you want to view, click the three-dot icon on the right and select **Settings**. 4. Under **Production site**, select **Show more** to expand the settings. 5. Locate the **Database details** and select **View**. 6. Copy the **Username** and **Password** to a text file. 7. Select the URL under **phpMyAdmin URL** to go to the database login screen. 8. Paste the **Username** and **Password** into the login screen to access the database.
