

Update a WordPress plugin with FTP

Article Number: 1196 | Rating: Unrated | Last Updated: Wed, Nov 18, 2020 at 9:42 PM

Some premium or custom WordPress plugins may not allow you to update from within WordPress. In this case you'll need to upload a copy of the newest version's files using FTP. Connect to your hosting with FTP. Navigate to the directory containing your WordPress site. Upload your plugin to the `/wp-content/plugins` directory. **Note:** If you do not have a way to unzip the file on the server, you will have to unzip the file locally and then upload the unzipped directory of files. Your plugin should now be updated.
