Find and replace with a WordPress plugin

Article Number: 1231 | Rating: 1/5 from 1 votes | Last Updated: Tue, Nov 17, 2020 at 6:54 PM

The easiest option for replacing data within your WordPress database is to use a plugin. They're useful for changing the domain, or any other information for your WordPress site. A common plugin used for this isÂ **Search & Replace**Â by Inpsyde. Log in to WordPress. Search for andÂ installÂ theÂ **Search & Replace**Â plugin. Activate the plugin. Go toÂ **Tools > Search & Replace**. Under theÂ **Backup Database**Â tab, click onÂ **Create SQL File**. **Note:**Â This will create a backup of your database before making any changes. Pick a set of steps based on what you need to replace: **Change WordPress domain URL** Click on theÂ **Replace Domain URL**Â tab. Enter your new domain into the '**Replace with'**Â field. ClickÂ **Do Replace Domain/Url.** **Replace other data** Click on theÂ **Search & Replace**Â tab. Fill out the '**Search for'**Â field with the data you want replaced. Fill out the '**Replace with'**Â field with the new data. ClickÂ **Do Search & Replace**.   **More info** Check out the developer's plugin pageÂ for more information about theÂ **Search & Replace**Â plugin.
