

Activate an integrated SSL

Article Number: 1263 | Rating: 1/5 from 3 votes | Last Updated: Wed, Nov 18, 2020 at 10:06 PM

An integrated SSL is a standard SSL that's built into several of our hosting products. When you purchase WordPress Hosting Ultimate or WordPress Hosting Ecommerce plan the SSL is automatically activated. The integrated SSL is activated when you [attach your domain](#) to the WordPress Hosting account, instead of when the product is first setup. The activation can take up to 30 minutes to complete. **Utilizing a paid SSL** If you upgraded a plan that already had a paid SSL installed, you can simply continue to use the current SSL certificate. If you would rather utilize the Integrated SSL, simply uninstall the SSL certificate from your package and the integrated SSL will automatically install afterwards.
