

Optimize table in MySQL

Article Number: 1271 | Rating: Unrated | Last Updated: Tue, Nov 17, 2020 at 8:07 PM

If your site seems slow, try optimizing the site database to remove gaps in data (also known as overhead). This can help restore speed *if* the database is at fault, but doesn't fix the scripting that initially created the overhead. Go to your Heart Internet [control panel](#) and open the Managed WordPress product page. Open my phpMyAdmin. Below the list of tables, select **Check all tables having overhead**. From the list select **Optimize table**. **More info** Find more information about optimizing tables at [mysql.com](#).
