Note: Managed WordPress accounts also support using `php.ini` files, but because it's difficult to refresh them when they're updated, we recommend using `.user.ini` files instead.

More info

- See [the PHP documentation](#) for further info on PHP files.

What filename does my PHP initialization file need to use?
User ini files are only compatible with PHP 5.4 and later, and you can't modify all of the same settings as with `php.ini` files. For further info, see [the PHP documentation for user.ini files](#).
