

Fix mixed content errors in WordPress

Article Number: 1309 | Rating: Unrated | Last Updated: Wed, Nov 18, 2020 at 10:43 PM

After adding an SSL and enabling HTTPS, you may find that some images do not display properly anymore.

If you have recently added an SSL, follow one of these sets of directions to fix your issue. **Using a plugin**

Follow these steps to install the [Really Simple SSL](#) plugin. [Install a plugin in WordPress](#). [Activate a plugin in WordPress](#). Under **Settings** select SSL. Providing your SSL is active, you can click the **Go ahead, activate SSL!** button. Review your site to verify that your images display properly. **Note:** This WordPress plugin is a third party plugin, please review the developer's page for issues with it's usage. **Using the .htaccess file** Connect to your hosting using FTP. [Redirect HTTP to HTTPS automatically](#). You have now setup the HTTPS redirect. Review your site to verify that your images display properly.
