

Find my SSL Security Seal

Article Number: 1348 | Rating: 1/5 from 4 votes | Last Updated: Wed, Dec 2, 2020 at 5:11 PM

Let your website visitors know they can conduct secure transactions on your site by displaying our free SSL Security Seal on your site. You'll be able to get the code and display the seal once we finish verifying your SSL certificate request and issue your SSL certificate. Go to your [Heart Internet account](#). Under **SSL Certificates**, select **Manage** for the certificate for the site you want to add the seal to. Under **SSL Security Seal** choose your preferred color and language. **Color:** Select **Light** for white background with black text or **Dark** for black background with white text. **Language:** Select the language for the seal text. Select **Activate** and the code for your site seal is displayed. You can now copy the code and add it to the HTML source code for the pages where you want the SSL Security Seal displayed. **Warning:** If you are replacing outdated SSL Security Seal code, remove the old code and replace it with the new code.
