Download my SSL certificate files

Article Number: 1356 | Rating: 1/5 from 3 votes | Last Updated: Wed, Dec 2, 2020 at 9:44 PM

If you're manually installing your SSL certificate on your hosting account or server, you need to download your primary and intermediate certificates from the SSL dashboard. **If the option to download your SSL certificate is disabled**, we've already installed the certificate for you. No need to follow these instructions! Go to your Heart Internet account. Select **SSL Certificates** and select **Manage** for the certificate you want to download. Under **Download Certificate**, select a **Server type** and then select **Download Zip File**. Your certificate will download.
