After your certificate request is approved, you can download your certificate from the SSL manager and install it on your IIS 7 server. Copy your certificate files onto the server Find the directory on your server where certificate and key files are stored, then upload your intermediate certificate (gd iis intermediates.p7b or similar) and primary certificate (.crt file with randomized name) into that folder. Add a Certificate Snap-in to the Microsoft Management Console (MMC) Click on yourÂ Start Menu, then click Run. In the prompt, type mmc and click OK. Click File, then clickÂ Add/Remove Snap-in. On the new window, click the Add button. On the new window, select A Certificates A and click A Add. Select A Computer account A for the snap-in and click A Next. Click A Local computer and click Finish. Click Close on the Add Standalone Snap-in window. Click OKÂ on the Add/Remove Snap-in window. Import the Intermediate SSL Certificate In the MCC Console, click â-, to expand Certificates (Local Computer). Right click on the Intermediate Certification Authorities A folder, hover over A All Tasks A and click A Import. On the new window, click A Next. Click A Browse, find your previously uploaded intermediate certificate file and click Open. Click Next, verify that the certificate information is proper and click Finish. Close the the import was successful notification. Install your SSL certificate Click on your Start Menu, then click Run. In the prompt, type inetmgrÂ and click **OK** to launch the Internet Information Services (IIS) Manager. Under the **Connections** panel on the left, click on your Server Name. In the main panel under the IIS section, double click on Server Certificates. Under the Actions panel on the right, click Complete Certificate Request. On the new window, click ... to browse, find your previously uploaded primary certificate file and click Open. Add aÂ Friendly name to easily identify this certificate in the future. Click OK. Bind the SSL certificate Under the Connections panel on the left, click â-, to expand the Sites folder. Click the Site Name that you plan to install the SSL certificate onto. Under the Actions Apanel on the right, find the Action Edit Site A section and click Bindings. On the new window, click Add and fill out the following information: Type:Â select https. IP Address: select All Unassigned. Port: type in 443. Host name:Â leave this empty. SSL Certificate: select your recently installed SSL. Click OK to confirm, then Close for the Site Bindings window. Restart IIS Under the Actions panel on the right, find the Manage WebsiteÂ section and click Restart.
