

IIS 7: Renew a certificate

Article Number: 1380 | Rating: 1/5 from 1 votes | Last Updated: Wed, Dec 2, 2020 at 9:39 PM

Renewing an SSL certificate is similar to requesting a new certificate. You can use the overview below to help you through the process. **Note:** These instructions apply to an SSL certificates hosted on third-party servers, dedicated servers, or virtual dedicated servers. Request a renewal in your account. If you select **Use previous CSR** in our online request form, you might need to [re-key your certificate](#) before downloading and installing the certificate files. If you want to enter a new Certificate Signing Request (CSR) in our online request form. After your certificate renewal request is approved, [download the certificate bundle from your account](#). You can also download the intermediate certificates from the [repository](#). [Install the SSL certificate](#). **Note:** As a courtesy, we provide information about how to use certain third-party products, but we do not endorse or directly support third-party products and we are not responsible for the functions or reliability of such products.
