

Create a custom XML export format

Article Number: 1593 | Rating: 1/5 from 4 votes | Last Updated: Wed, May 12, 2021 at 12:31 PM

Create a custom XML export format for your orders, customers, or coupons. **Required:** Customer / Order / Coupon Export is a premium WooCommerce extension included with WordPress Ecommerce Hosting or as a standalone purchase. Go to **WooCommerce > Exports > Custom Formats**. Select the export type that you would like to create - **Orders**, **Customers**, or **Coupons**. Click **Add new XML format**. Select an existing format to use as a starting point for your custom format and click **Load**, or click **X** to start from scratch. Update the Format Options: **Name:** Enter an internal name for your export format. **Indent output:** Enable to pretty print the XML output with indents, which is helpful if a human is reading the file but unnecessary otherwise. **Include all meta:** Choose whether to include all meta in the export. [Click here to learn more about adding meta to exports.](#) Update the **Column Mapping** to determine which fields will appear on your export. When adding columns, the **data source** determines what data will appear in the export. You can select an option from the list, [add a custom meta key](#), or [add a static value](#). Click **Save**.
