

Introduction to WooCommerce Bookings

Article Number: 1626 | Rating: Unrated | Last Updated: Wed, May 12, 2021 at 2:04 PM

With this plugin, you can sell rentals, reservations and scheduled events that require your customers to book a time slot in order to utilize them. WooCommerce Bookings achieves that by introducing a new custom **bookable product** with relevant features that makes selling and managing bookings easier. **Required:** WooCommerce Bookings is a premium WooCommerce extension included with WordPress Ecommerce Hosting or as a standalone purchase. Some common use cases for this plugin are: Booking appointments. Managing hotel and room reservations. Booking services (e.g. seminar, training, catering etc). Kindly note that WooCommerce Bookings may not be suited for: One-time tickets and events - the default virtual product functionality offered by WooCommerce may be a better fit for this kind of product. Recurring events - bookable products created by this plugin cannot be scheduled to be utilized more than one time.
