

2.

increase the WordPress memory limit

Article Number: 1668 | Rating: Unrated | Last Updated: Wed, May 12, 2021 at 3:05 PM

You may run into an issue when working with your WooCommerce site that asks you to increase the WordPress memory limit. The easiest way to accomplish this is by editing your wp-config.php file. **Warning:** You should always backup your site before making changes to the wp-config.php file. Access files in your Managed WordPress account. Locate the file wp-config.php in the root directory or folder. Double-click the wp-config.php file to open it. Select **Edit**. Find the line

```
/* That's all, stop editing! Happy publishing. */
```

Right above the line in step five, add this code:

```
define('WP_MEMORY_LIMIT', '256M');
```

7. Select **Save**.
