

Export Pickup Locations

Article Number: 1676 | Rating: Unrated | Last Updated: Wed, May 12, 2021 at 3:46 PM

With the Local Pickup Plus plugin, you can manage pickup locations in bulk using the built-in CVS import/export functionality. This article will guide you through a quick location export as well as a more customizable, full export. **Required:** Local Pickup Plus is a premium WooCommerce extension included with WordPress Ecommerce Hosting or as a standalone purchase. To run a quick export with default settings: Go to **WooCommerce > Settings > Shipping > Pickup Locations**. Check the locations you want to export. Select **Export** from the **Bulk Actions** menu. Click **Apply**.

To run a full export: Go to **WooCommerce > Settings > Shipping > Pickup Locations**. Click **Export Pickup Locations**. Update the export settings as needed: **Separate Fields By:** Choose if the CSV file data will be separated by commas (default) or tab spaces. **Limit Records:** Limit the number of export rows. Recommended when working with a large number of locations. For example, '50' would limit the export to the first 50 locations. **Offset Records:** Set the number of records to be skipped in this export. Recommended when working with a large number of locations. For example, '50' would ignore the first 50 locations in the list when exporting. Click **Export**.
