

Redeem a voucher by scanning a barcode

Article Number: 1707 | Rating: Unrated | Last Updated: Wed, May 12, 2021 at 4:10 PM

If your voucher template includes a QR code, you can scan this code to redeem the voucher. **Required:** PDF Product Vouchers is a premium WooCommerce extension included with WordPress Ecommerce Hosting or as a standalone purchase. **Note:** Barcode scanning is only supported for QR codes - while you can add other types of barcodes to your voucher, you cannot scan/automatically redeem those codes. These other code types are included in case your store/device supports alternative barcode type scanning. You can still key in the barcode manually for these vouchers on the **Redeem Voucher** page. While using a device capable of reading QR codes, follow the steps below to scan a voucher's QR code: Go to **WooCommerce > Vouchers**. Select **Redeem Voucher**. Click **Scan QR Code**. Single-purpose vouchers are redeemed based on quantity, so one scan is equal to one quantity redeemed. If a voucher has more than one quantity available, you can scan it multiple times to redeem the desired quantity. Multi-purpose vouchers are redeemed based on amount, so after scanning you'll need to enter the amount to redeem.
