

1.

Create my Intuit connection app

Article Number: 1788 | Rating: Unrated | Last Updated: Wed, May 12, 2021 at 4:44 PM

Step 1 of the Set up Intuit Payments series. Follow the steps below to create a free connection app with Intuit: **Required:** Intuit Payments is a premium WooCommerce extension included with WordPress Ecommerce Hosting or as a standalone purchase. Log into the [Intuit Developer site](#). Navigate to **Dashboard > Create an app**. Select **QuickBooks Online and Payments**. Enter a name for your app, select **Payments (US only)** for the scope, then select **Create app**. Select the **Production** tab and update the **Trems of Service Links** and **Countries you accept connections from** if necessary. Select **Save**. Go to the **Keys & OAuth** tab. Copy and paste the **Client ID** and **Client Secret** into the plugin settings on your website. Update the **Redirect URIs** with the URI provided in the plugin settings. This will take the following format (replace "EXAMPLE.com" with your store's URL):

`https://EXAMPLE.com?wc-api=wc_intuit_payments_auth`

Update the **App URLs** fields. You can use the homepage or shop domain for your **Launch URL** and **Disconnect URL**— these fields are required but don't require a special URL. Click **Save**.
