

Create a Categories in Cart Cart Notice

Article Number: 1821 | Rating: 1/5 from 4 votes | Last Updated: Wed, May 12, 2021 at 4:58 PM

The Categories in Cart notice, when using the "Show" Categories option, allows you to select one or more categories which, when a product from the category is in the customer's cart, will trigger the notice. **Note:** the categories must match exactly, child categories are not used to activate this notice. The "Hide" Categories option allows you to select one or more categories which, when a product from the category is in the customer's cart, will hide the notice. This lets you conditionally remove the notice if an item from a cross-sell category has been added. **Required:** WooCommerce Cart Notices is a premium WooCommerce extension included with WordPress Ecommerce Hosting or as a standalone purchase. A "Categories in Cart" Cart Notice can be created by: Go to **WooCommerce > Cart Notices**. Select the **New Notice** tab. Select **Categories in Cart** from the **Type** menu. Enter a name for the notice in the **Name** field. Create your custom **Notice Message**. A basic notice is provided to get you started, as well as the variables related to the notice type. Enter **Call to Action** text (optional) - This text will be rendered next to the cart notice. Enter a **Call to Action URL** (optional) - This specifies where the user will go upon clicking the Call to Action button. To show the notice if any selected category is in the cart, add all the categories you wish to show in the "**Show**" **Categories** field. To hide the notice if any selected category is in the cart, add all the categories you wish to hide in the "**Hide**" **Categories** field. Select the **Create Cart Notice** button.
