The SMTP relay
server for your VPS
depends on the
data centre where
it's located:

Data center	SMTP Relay Server
U.S. (West)	dedrelay.secureserver.net

Your server must send mail using our relay servers. This prevents network abuse and helps ensure our customers don't lose network access for using the same network as a spammer.

For the most part, you don't need to worry about these settings unless something isn't working, or unless you want to use a different mail server daemon on your server.

Note: Our servers have an outbound email limit of 5000 per day. If you need to send *more* than 5000 emails per day, [contact support for assistance](#).
