

## MWP - Domains & Website Setup - How to assign your domain

Article Number: 1938 | Rating: Unrated | Last Updated: Thu, Mar 5, 2026 at 8:24 PM

You can assign your own domain to your website either during setup or after the website has already been created. Follow the steps below based on your situation. **Assign a Domain While Creating Your Website.** Begin creating your website by following the guide “Extendify” Create Website. When prompted to choose a domain, select Use a domain that you own. Enter the domain you would like to use. Continue with the setup to finish creating your website. **Assign a Domain to an Existing Website** If your website was initially created using a temporary domain, you can update it at any time: Go to the Websites page in your dashboard. Find the website you want to update. Click the three dots (⋮) on the right side of the website. Select Modify Domain. Enter the domain you want to assign to the website. You will see a message that says “Updating domain records.” Refresh the page to complete the process.
