cPanel - Security & Access - How to install and manage SSL certificates (AutoSSL behaviour)

Article Number: 1970 | Rating: Unrated | Last Updated: Thu, Mar 5, 2026 at 8:30 PM

 The Managed WordPress packages come with free, auto-SSLs that covers all the domains that are added. By defau
installed once a new domain was added to the package, and the domain is pointing correctly to the Managed WordP
You can check the status of an SSL by accessing the Managed WordPress platform. Once logged in, you will need t
Website overview using the Manage Website button: Once there, on the main Overview page you can see the SSL s
site. The process is fully automatic, and as long as the domain or subdomain is pointing correctly to the Managed W
hosting package, the SSL will install and re-issue automatically. Â Â
