

MWP - Website Management Ops - How to access and read error logs

Article Number: 2012 | Rating: Unrated | Last Updated: Thu, Mar 5, 2026 at 8:34 PM

From the main page of your Managed Wordpress, click on the "Manage Website" Icon. Once that button is clicked, you will be redirected to the Manage Website area: The Logs tab allows you to review logs generated by your website, which can be useful for troubleshooting and diagnosing issues. Because logs can collect a large amount of data in a short time, the system automatically discards them after processing. Currently, only Access Logs are available for download. To view a log, click the download icon next to the desired entry. To remove a log, click the trash can icon. Also, the next tab, which is called "Security" can be useful in the case the "Logs" one is needed.

Security Tab The Security tab can also be helpful when investigating issues that may require reviewing logs. It provides a comprehensive overview of all detected vulnerabilities. If any vulnerability requires user action, a red dot appears on the tab. The overview section displays: The number of active vulnerabilities The number of vulnerabilities mitigated The number of attacks blocked this year If no attacks have been blocked this year, the total number of mitigations is shown instead.

How to see the Logs in MWP: Enable WordPress debug logs

Steps: Open wp-config.php Add or edit these lines above /* That's all, stop editing! */: `define('WP_DEBUG', true); define('WP_DEBUG_LOG', true); define('WP_DEBUG_DISPLAY', false);`

Where the log appears: `/wp-content/debug.log` You can view it using: File Manager in your hosting panel SFTP SSH (if allowed) Leave WP_DEBUG off on live sites when finished.

Check logs from your hosting dashboard Go to My Sites > Tools > Logs Includes PHP errors and server activity

How to see the logs on cPanel First and easiest method: Here are the steps to see the Error Logs in your cPanel: Log in to cPanel Go to Metrics Click Errors You'll see the most recent errors Second method for raw logs: In cPanel, go to Metrics Click Raw Access Download the log file Open it in a text editor
