What are our nameservers?

Article Number: 208 | Rating: 2/5 from 9 votes | Last Updated: Wed, Mar 10, 2021 at 2:38 PM Your domain names nameservers will depend on if the domain is registered with us, or if it's a reference. For domains registered with Heart Internet, your nameservers are set automatically from the A Manage Domain A section (this will be the same for the Domain Control Panel for resellers). if they have been changed, they can be set back by following these steps: Go to your Heart Internet Customer Area Select Manage Domain Names Select the domain from the drop-down under the A Manage Domain Parking heading, and select Manage Select Change Nameservers Check Our nameservers and select Change Nameservers The nameservers that are set will use the domaincontrol.com domain. For Active Domain References (and whitelabeled nameservers) Domain names not registered with Heart Internet, but use our hosting services (not including dedicated servers), you can use the following nameservers. Once these are set, should go to the A Manage Domain Parking section for the reference and set the domain to accept these nameservers: If you would like to use your free services for this domain, you will need to point the name servers to Heart Internet. Click here to have this done automatically. The nameservers you need to set are: ns.mainnameserver.com ns2.mainnameserver.com We also provide Virtual Nameservers for resellers who wish to use their own domain for their customers. This can be purchased as an add-on via the Reseller Control Centre. IP Addresses: The IP addresses for our whitelabeled nameservers are: ns:Â 79.170.40.2 ns2: 79.170.43.3
