

## How do .tel domain names work?

Article Number: 209 | Rating: 1/5 from 2 votes | Last Updated: Thu, Apr 23, 2015 at 11:19 AM

.tel are different from other domain names, as they allow you to store, publish, and update online all your contact information and keywords without needing a fully designed website. With a .tel domain, you have access to the .tel Control Panel, that allows you to add or remove contact information, but you cannot set up web or email forwarding, change name servers, or use a .tel domain name to host your own website. An example of how a .tel domain works is viewable for Telnice, the .tel registrar. You can see Telnice's contact information at [telnice.tel](http://telnice.tel), and their website at [telnice.org](http://telnice.org).
