

How do I connect to my site using Dreamweaver?

Article Number: 293 | Rating: 1/5 from 1 votes | Last Updated: Thu, Apr 23, 2015 at 12:32 PM

Adobe Dreamweaver is a web design tool that allows you to create sites on your desktop computer and then upload them into your web space. To connect to your site using Dreamweaver: Launch Dreamweaver Click 'Site' Select 'Manage Sites' Select the site you wish to edit Click 'Edit' Select the 'Servers' category and click the + icon Enter the following information in the 'Basic' tab of the 'Site Setup' window: Server Name: FTP Server

Connect Using: FTP

FTP Address: Your FTP Address

Port: 21

Username: Your Username

Password: Your Password

Root Directory: public_html

Web URL: Your website address Expand 'More Options' Select 'Use Passive FTP' Click 'Test' When you get the message 'Dreamweaver connected to your web server successfully', you have completed the connection Please note: Application servers and DSN or ODBC connections to the database are not supported.Â In certain versions of Dreamweaver, you may experience problems connecting.Â Please increase the 'Connection Timeout' to 10 seconds, and this should resolve the problem.
