

Is ASP.NET 3.5 available, and why does my script say that there is only Version 2?

Article Number: 403 | Rating: Unrated | Last Updated: Thu, Apr 23, 2015 at 12:29 PM

ASP.NET 3.5 is available on your Windows hosting account. ASP.NET version 3.5 is an extension of ASP.NET version 2.0. There are no incompatibilities between the two versions of the language. Version 3.5 reports to scripts as version 2.0 so that older scripts will know it is compatible with its version of the language. We also have ASP.NET version 4.0 available. Version 4.0 was a major overhaul of the underlying functionality, and is not compatible with ASP.NET version 2.0. To set your site to ASP.NET version 4.0: Log into your eXtend Control Panel Click 'Manage IIS Application Pools' Select 4.0 from the dropdown menu under Application Pool Managed Runtime Version Click 'Update Now' You can now only run ASP.NET 4.0 scripts
