

### **Can I put PHP code in .html or .htm files?**

Article Number: 423 | Rating: 1/5 from 6 votes | Last Updated: Thu, Apr 23, 2015 at 12:20 PM

You can run PHP code in .html/.htm files by changing the .htaccess file. To change the .htaccess file: Back up your .htaccess file Open your .htaccess file or create one in a text editor At the end of the file, paste this code: AddHandler cgi-script .html

```
SetEnv PHP_EXTENSION .html
```

```
AddHandler cgi-script .htm
```

SetEnv PHP\_EXTENSION .htm Upload the new .htaccess file to your server PHP code will now run in .htm and .html files
