

Why can't I create 'pretty' URLs in Concrete5?

Article Number: 429 | Rating: 1/5 from 1 votes | Last Updated: Thu, Apr 23, 2015 at 12:15 PM

At times, when you install the concrete5 content management system, the software will have difficulty creating 'pretty' URLs, such as turning your-domain.com/index.php/about-us into your-domain.com/about-us/. This is related to the configuration of PHP on our servers, but can be easily circumvented by adding some code to a configuration file. To fix this problem: Download your site.php file in your /config/ directory Add this line to your site.php file: `define('SERVER_PATH_VARIABLE', 'REDIRECT_URL');` Download your .htaccess file Add these lines to your .htaccess file: `RewriteEngine On`
`RewriteBase /`
`RewriteCond %{REQUEST_FILENAME} !-f`
`RewriteCond %{REQUEST_FILENAME} !-d`
`RewriteRule .* index.php [L]` Re-upload both the site.php and .htaccess files Please raise a Support Ticket with our Customer Services team if you are still having difficulty.
