

Can I use command line arguments with a PHP scheduled task?

Article Number: 432 | Rating: 2/5 from 4 votes | Last Updated: Thu, Apr 23, 2015 at 12:20 PM

You can use command line arguments, but you need to use the `$argv` array. And the `$argv` array is only available if the `register_argc_argv` setting is enabled in PHP. This is disabled by default, but you can create a `php.ini` file to enable `register_argc_argv`. To enable this setting: Download your existing `php.ini` or create a new one in your text file Add the following line: `register_argc_argv = On` Upload the file You can then specify this particular `php.ini` file in the command for the scheduled task. For example, if you use: `/usr/bin/php5 -c /home/sites/your-domain.com/php.ini /home/sites/your-domain.com/cron.php argument1 argument2` The `cron.php` file will be able to use `argument1` and `argument2` when running.
