How do I uninstall the software I've installed using a one-click installer?

Article Number: 450 | Rating: 1/5 from 2 votes | Last Updated: Thu, Apr 23, 2015 at 12:30 PM
If you have installed software through your eXtend Control Panel, such as WordPress, Joomla!, or osCommerce, the is a simple process to delete both the software files and the database it may have created. The first step is to delete the software files: Log into your eXtend Control Panel Click 'File Manager' Click the 'public_html' folder Select the fil or directories created by the software Click the 'Delete' icon The files and directories will now be deleted If the software has also created a database, to delete the database: Return to your eXtend Control Panel home page Clic 'MySQL Databases' Scroll down to 'Manage MySQL Databases' Check the box under the 'Delete?' column Click 'Modify' Confirm the deletion The database will now be deleted
