

Why isn't there a one-click installer for Magento e-commerce software?

Article Number: 454 | Rating: 1/5 from 1 votes | Last Updated: Thu, Jul 9, 2026 at 4:59 PM

Unfortunately, we have found that Magento is a very resource-hungry application.Â On a shared hosting account, it can have an impact on the server's performance, thereby affecting all the websites on the server. Because of this, we do not have a one-click installer for Magento on shared hosting. We also ask that customers on a shared hosting account do not install Magento themselves. If you would like to install Magento onto your account, consider upgrading to cPanel hosting, a VPS, or a Dedicated Server.Â This avoids the risk of causing issues to other users, while also giving you the power you need to get the most out of the software.
