

## Can I host multiple web sites on my hosting account?

Article Number: 482 | Rating: 1.6/5 from 7 votes | Last Updated: Thu, Apr 23, 2015 at 12:48 PM

With our shared hosting packages, there are limits to the number of websites you can host. Starter Pro and Home Pro packages can only host one website. You can use web forwarding to point more than one domain name to the account, but you can only have one website. Business Pro can host three websites, each with their own domain name. You can also use web forwarding to point more domain names to the account. Reseller Pro allows you to host any number of websites on individual hosting packages you tailor to your specifications, with as many domain names as you want to map to each package. Premium Hosting, VPS, Hybrid Servers, and Dedicated Servers also allow you to host as many websites and domain names as you wish.
