How do I set up error pages such as ’404: File Not Found’ and ’500: Server Error’ on my site?

Article Number: 483 | Rating: 5/5 from 1 votes | Last Updated: Thu, Apr 23, 2015 at 12:45 PM

The two most common errors are 404 (File Not Found) and 500 (Server Error). If a visitor attempts to visit a page tha they will get a 404 error.Â If the web server is having problems and cannot load the page, the visitor will get a 500 e difficulties visiting your site, an error page can give them information they need to find the right page. You can create pages and customise them as needed to provide your visitors with clear information to help them navigate your site. to create and edit the 404 and 500 error pages, either using a CGI script to send the errors to the appropriate error p .htaccess file to send the errors to the pages. CGI Script: Log into your eXtend Control Panel Under ‘CGI Scripts’, cl Page’ Make certain the directory is the one you want to install the error pages into Click ‘Install Now’ This creates 40 in your directory Edit and customise the 404 and 500 pages through your eXtend Control Panel File Manager .htacc and upload your own 404.html and 500.html pages to your public_html directory Create a new or edit your existing .h these two lines: ErrorDocument 404 â€œ/404.htmlâ€•

 ErrorDocument 500 â€œ/500.htmlâ€• Upload the .htaccess file into the public_html directory You can also use the method to create error pages for other errors, such as 401 (Unauthorized), 403 (Forbidden), and 504 (Gateway Time
