

Can I use Teamspeak on my hosting account?

Article Number: 494 | Rating: 1/5 from 4 votes | Last Updated: Wed, Jul 8, 2026 at 4:40 PM

We do not allow the use of Teamspeak voice-over-IP (voIP) on our shared hosting accounts. Any account discovered to be running such a script will be disabled. Permanent processes such as Teamspeak can take up a large amount of the server's processing power, causing difficulty for other customers on the same server. You are free to run Teamspeak and other voIP chat systems on one of our VPS or Dedicated server packages.
