

How do I mount the backup space on my CentOS server?

Article Number: 50 | Rating: 1/5 from 1 votes | Last Updated: Wed, Aug 18, 2021 at 1:15 PM

To mount backup space on your server, you need two programs to be installed. If you run the command to mount backup space and it fails, you may need to install them yourself. Log onto your server over SSH
Install rpcbind with this command: `yum install rpcbind` Install nfs-utils with this command: `yum install nfs-utils` Start the rpcbind service: `service rpcbind start` Mount the backup space: `mount -a` Your backup space will be mounted
