

How can I block someone from visiting my site?

Article Number: 500 | Rating: 1/5 from 2 votes | Last Updated: Thu, Apr 23, 2015 at 12:40 PM

There are two ways you can block someone from visiting your website. **IP Address Blocking** If you know their IP address, you can block them by using the IP Address Blocking tool. Log into your eXtend Control Panel Scroll down to 'Web Tools' Click 'IP Address Blocking' Enter the IP address you wish to block Click 'Create' The IP address will be blocked from visiting your site. Using .htaccess to block by IP address If you know their IP address and know where your .htaccess file is, you can also block them by pasting in code into your .htaccess file. Back up your .htaccess file Open your .htaccess file or create one in a text editor At the end of the file, paste this code: `order allow,deny`

`deny from 111.222.33.444`

`allow from all` Upload your new .htaccess file to your server You can include as many IP addresses as you wish, with each on a new line and with 'deny from' preceding the address. If you want to block a range of IP addresses, leave off the last set of numbers. For example, 'deny from 111.222.33.' will block not only 111.222.33.444, but also 111.222.33.1, 111.222.33.500, 111.222.33.22, and all numbers before, after, and in between. **Using .htaccess to block by ISP** If you do not know the IP address, but know the ISP, you can also block them by including the ISP in your .htaccess. Back up your .htaccess file Open your .htaccess file or create one in a txt editor At the end of the file, paste this code: `Order allow,deny`

`deny from spam-isp.com`

`allow from all` Upload your new .htaccess file to your server
