

How can I get a breakdown of the countries in my Webalizer statistics?

Article Number: 617 | Rating: 1/5 from 1 votes | Last Updated: Thu, Apr 23, 2015 at 12:34 PM

You can get a breakdown of the countries that have visited your site, but it is not enabled by default due to the amount of processing time required. Each time you run Webalizer, it would need to resolve the IP addresses for each visitor to the country of origin. This can add minutes to the time it takes to run the software. If you do not mind the wait, you will need to edit the webalizer.conf file in your Webalizer directory. At the end of the file, add the following lines:

```
DNSCache dns.cache
```

```
DNSChildren 1
```

This will not have an effect on existing log files, but will update new files created after.
