

## How do I point a domain name to my virtual server?

Article Number: 657 | Rating: 1.8/5 from 12 votes | Last Updated: Wed, Aug 18, 2021 at 3:54 PM

To set up a domain name on your VPS or Hybrid Server using our DNS servers, you will either need a domain reference or active domain name on our systems. When your domain name is in our system, you can point it at your virtual server using the Express DNS wizard available in your server Control Panel. To use the Express DNS wizard: Log into your Customer Area Click 'Manage VPS & Hybrid Servers' Select the server you wish to point the domain name to Click 'IP & DNS' Click 'Launch Express DNS Wizard' Select the domain name you wish to use Click 'Update Now' This automatically sets up your domain's DNS to the server You can also manually edit the DNS of your domain name from the Domain Control Panel.
