

How can I password-protect a directory using Plesk?

Article Number: 663 | Rating: 1/5 from 2 votes | Last Updated: Wed, Aug 18, 2021 at 2:07 PM

Plesk has the built-in feature to password-protect directories. It is assumed that you are using Plesk as a Service Provider. If you are using Plesk as a Power User, switch to Service Provider: Go to the 'Server' tab Go to 'Interface Management' Go to 'Panel Appearance' Click 'Service Provider' Click 'OK' You will now be in Service Provider mode To password-protect a directory: Click 'Domains' Click 'Control Panel' for the domain you want to set up a password-protected directory in Click 'Websites & Domains' Click 'Show Advanced Operations' Click 'Password-Protected Directories' Click 'Add Protected Directory' Enter the name, location and title of the directory you want to protect Click 'OK' Click on the folder Click 'Add New User' Enter in the username for the user Enter in the password Enter in the password again Click 'OK' The directory is now password-protected
