How do I automatically back up my data to my server's backup drive using cPanel and WHM?

Once you set up and mount a backup drive to your server, you can then set it up to automatically back up your data
WHM has some built-in functionality to help you create and manage these account backups in your server. To set up
WHM Click 'Backup' Click 'Backup Configuration' Specify '/backups' as your default backup directory Check the box
in the default backup directory' Select 'Enable' under 'Mount Backup Drive as Needed' Select the frequency at which
backups Select which user accounts you want to back up Click 'Save configuration' The backups will now be automa
backup space
