What is DMARC?

Article Number: 756 | Rating: 1.3/5 from 16 votes | Last Updated: Tue, Jul 2, 2019 at 1:34 PM

Domain-based Message Authentication, Reporting, and Conformance Â (DMARC) is a system which tells a receiver how to handle emails which may not pass Sender Policy Framework (SPF) or Â DomainKeys Â Identified Message (DKIM) checks. You can read more about it [here](#).Â

Does Heart Internet perform DMARC checks?Â

No, our mail servers do not check incoming emails for DMARC keys at present.Â

Can I add DMARC support for my domain?Â

DMARC only requires a Domain Name System (DNS) record to be added in the form a TXT record. This can be added if on our nameservers, but please note that we do not perform checks in incoming emails.Â
