To give others access to your Linux Hosting account, add them as FTP users so they can also upload files or manage your site. You can limit what these users can access, and how much they can upload. Go to your Heart Internet [customer area](#) and select **cPanel Hosting**. Select the your desired cPanel hosting account and select **Login**. In the upper-left corner of the account **Dashboard**, select **FTP Manager**. In the cPanel **FTP Accounts** page, below **Add FTP Account**, complete these fields:

Field	What it means...
-------	------------------

Log in	The first part of your username. The full username includes @[your account's primary domain name] . So if your primary domain is <i>coolexample.com</i> , and you enter <i>ftpuser</i> , then the full username for FTP will be <i>ftpuser@coolexample.com</i> .
--------	---

1. Click **Create FTP Account**.

Repeat these steps for any other users you want to add. You can have up to 50 FTP users for Economy and Deluxe accounts, and an unlimited number for Ultimate accounts.

More info

- For more help, see the [cPanel documentation for the FTP Accounts feature](#).
