Understanding Linux Hosting with cPanel

Article Number: 861 | Rating: Unrated | Last Updated: Wed, Jun 3, 2020 at 11:13 PM

Linux hosting, the most popular web hosting platform, offers features commonly used by web designers. cPanel, a hosting control panel, uses a graphical interface to access most of those features. To get your website up and running, set up your Linux Hosting account with cPanel. **Basic steps to use Linux hosting** Use a FTP client to **upload your files** Your hosting account uses *public_html* as the root directory for your primary domain. If you don't have a website yet, install a Content Management System (CMS), such as WordPress, to build your website and manage its content. After you have a website up and running, set up backups so you don't have to worry about losing your content. **More info** Move my cPanel website with FTP and FileZilla
