

Change PHP upload limits for my Linux Hosting account

Article Number: 888 | Rating: 1/5 from 3 votes | Last Updated: Wed, Jun 3, 2020 at 11:03 PM

Here's how you can use cPanel to change the PHP upload limit for your Linux Hosting account. By default, the limit is 32 MB. Go to your Heart Internet [customer area](#) and select **cPanel Hosting**. Select the your desired cPanel hosting account and select **Login**. In the account **Dashboard**, click **cPanel Admin**. In the cPanel Home page, in the **Software** section, click **Select PHP Version**. In the cPanel **PHP Selector | extensions** page, in the upper right corner click **Switch To PHP Options**. In the cPanel **PHP Selector | options** page, click the value for **upload_max_filesize**, choose a new value from the menu and then click **Apply**. Click the value for **post_max_size**, choose a new value from the menu and then click **Apply**. Click **Save**. **More info** Setting an upload limit means it won't be rejected by the server based on file size, but doesn't guarantee an upload will complete. An upload might fail due to browser timeouts from slow upload speeds, or from maxing out your account resources. For help with using File Manager, see [the cPanel File Manager documentation](#).
