

Export MySQL databases

Article Number: 897 | Rating: Unrated | Last Updated: Wed, Jun 3, 2020 at 11:08 PM

Access your database via PHPMyAdmin In the phpMyAdmin home page, select the database that you want to export. From the tabs at the top of the page select **Export**. To export the *entire* database, continue with the next step. To export *only specific tables* in the database, below **Export method** select **Custom - display all possible options**, and in the **Tables** list select only the tables you want to export. Leave all other options set to their default values. Click **Go**. You'll be prompted to open or save the file. Click **OK**. The database or table from the database is exported as an SQL file.
