

See my server resource usage and uptime

Article Number: 942 | Rating: Unrated | Last Updated: Wed, Sep 9, 2020 at 8:12 PM

See the resource usage (for CPU, Disk space, and available RAM) and uptime in the Dashboard for your dedicated server. Go to your **product page**. Under **Servers** next to the server you want to see, select **Manage**. In the **Dashboard** for the server, select **Monitoring**. In the Monitoring tab: **Usage** shows the resource usage (of 100%) for the server CPU and available disk space and RAM. **Uptime** shows the server uptime percentage for the last 30 days. For fully-managed servers only: **Services** shows the response time in milliseconds (ms) for web services including FTP, HTTP, IMAP, POP3, SMTP and SSH. **More info â Required** Resource and service monitoring are managed by the **panopta-agent** on your server. Do **not** delete this component, and be sure you're not blocking the IP addresses used by the monitoring system.
